

## Press Release - For Immediate Release

# OpusWorks Elevates eLearning with immersive 360° Virtual Simulation.

**[Atlanta, GA]** - OpusWorks, a leading provider of eLearning solutions for process improvement, is proud to announce its release of a Virtual Capstone Simulation that provides a perfect culmination to all the lessons learned throughout the Foundational / Yellow Belt curriculum. Students are tasked with traveling to a USAF Propeller Refurbishment facility where their help is needed to help uncover the root causes behind production shortfalls. During the Simulation, students walk through a virtual 360° world where they interact with on screen characters, interview workers, ask follow up questions, and observe cycle times and process flows. When their Gemba Walk is complete, they return to their virtual office and sit down at their desk to demonstrate their command of:

- Building a SIPOC
- Constructing a Swim Lane Process Map
- Completion of a Waste Walk Checklist
- Cycle Time Analysis
- Process Step Spotlight
- Lean Tool Selection

By practicing the knowledge they've acquired throughout the Foundational / YB curriculum on a real world business case, students are able to gain valuable experience and the confidence needed to apply the lessons learned to their own work area.

OpusWorks' continuously improving content journey has led to a focus on the power of the "Learn – Do" methodology for workforce transformation. Now that the door to immersive 360° simulations stands wide open at OpusWorks, the future for CPI practitioners looks even brighter!

## About OpusWorks:

OpusWorks is a leading provider of eLearning cpi solutions that delivers engaging and interactive content to students and deployment enablement systems that enable rapid scaling across organizations or enterprises. With a commitment to innovation and excellence, OpusWorks is dedicated to helping clients achieve their operational excellence goals.
